

## 1 The what and the when

The optional keys `col`, `date` and `version` allow to date and version a change of a particular type. Here are some examples of use.

```
\begin{tdoctech}[date      = 2024-10-29,
                  col-chges = red]
  \item Info...
\end{tdoctech}

\begin{tdocupdate}[version  = 1.2.3,
                  col-chges = ForestGreen,
                  col       = ForestGreen]
  \item Info...
\end{tdocupdate}

\begin{tdoctic}[To hide]<\faEyeSlash>%
               [version = 4.5.6,
               date     = 2025-11-30]
  \item Info...
\end{tdoctic}
```

This gives :
