

1. By importing the \LaTeX code

To obtain renderings by importing the code from an external file, instead of typing it, simply use the `\tdocshowcaseinput` macro whose option uses the syntax of that of `\begin{tdocshowcase}...` `\end{tdocshowcase}` and the mandatory argument corresponds to the path of the file.

Example. *The following was obtained via `\tdocshowcaseinput{external.tex}`.*

Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...

As for `\tdocshowcaseinput[color = orange]{external.tex}`, this will produce the colour change shown below.

Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...
