

## 1. By importing the L<sup>A</sup>T<sub>E</sub>X code

To obtain renderings by importing the code from an external file, instead of typing it, simply use the `\tdocshowcaseinput` macro whose option uses the syntax of that of `\begin{tdocshowcase}...` `\end{tdocshowcase}` and the mandatory argument corresponds to the path of the file.

**Example .1.** *The following was obtained via `\tdocshowcaseinput{external.tex}`.*

————— *Start of the real output* —————  
*Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...*  
————— *End of the real output* —————

*As for `\tdocshowcaseinput[colstripe = red, coltext = orange!75!black]{external.tex}`, this will produce the color change shown below.*

————— *Start of the real output* —————  
*Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...*  
————— *End of the real output* —————
