

The `tutodoc` package ¹ is used by its author to semantically produce documentation of L^AT_EX packages and classes in a tutorial style ², and with a sober rendering for reading on screen.

Note. *This package imposes a formatting style. In the not-too-distant future, `tutodoc` will probably be split into a class and a package.*

¹The name comes from “*tuto·rial·type doc·umentation*”.

²The idea is to produce an efficient PDF file that can be browsed for one-off needs. This is generally what is expected of coding documentation.
