

## 1 By importing the $\LaTeX$ code

To obtain renderings by importing the code from an external file, instead of typing it, simply use the macro `\tdocshowcaseinput` whose option uses the same syntax as that of the environment `tdocshowcase`, and the mandatory argument corresponds to the path of the file. Here are some examples of use.

**Example .1** (Standard use).

```
\tdocshowcaseinput{examples/showcase/external.tex}
```

This gives:

*Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...*

**Example .2** (With framing lines).

```
\tdocshowcaseinput[style = rule]{examples/showcase/external.tex}
```

This gives:

————— *Start of the real output* —————

*Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...*

————— *End of the real output* —————

**Example .3** (A colored stripe).

```
\tdocshowcaseinput[style      = stripe,  
                    col-stripe = red,  
                    col-text  = LightCoral]%  
{examples/showcase/external.tex}
```

This gives:

————— *Start of the real output* —————

*Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...*

————— *End of the real output* —————
