

1. Improving the source code

 Important.

If you want to participate in `tutodoc` you'll need to use the \LaTeX 3 programming paradigm.

Participation as a coder is made via the <https://github.com/bc-tools/for-latex/tree/tutodoc> repository corresponding to the `tutodoc` development branch. Do not use the `main` branch, which is used to freeze the latest stable versions of projects in the single <https://github.com/bc-tools/for-latex> repository.
