

1. The what and the when

The optional keys `col`, `date` and `version` allow to date and version a change of a particular type.¹ Here are some examples of use.

```
\begin{tdoctech}[col = red,
                 date = 2024-10-29]
  \item Info 1...
  \item Info 2...
\end{tdoctech}

\begin{tdocupdate}[col      = ForestGreen,
                  version = 1.2.3]
  \item Info 1...
  \item Info 2...
\end{tdocupdate}

\begin{tdocfix}[date      = 2025-11-30,
               version = 4.5.6]
  \item Info 1...
  \item Info 2...
\end{tdocfix}
```

This gives :

Start of the real output

[col = red, date = 2024-10-29]

Info 1...

Info 2...

 **UPDATE.**

- Info 1...
- Info 2...

 **FIX.**

- Info 1...
- Info 2...

End of the real output

¹The warning at the end of the section ?? gives the technique used behind the scene, while showing the need to offer specialized keys.
