

1. By importing the L^AT_EX code

To obtain renderings by importing the code from an external file, instead of typing it, simply use the `\tdocshowcaseinput` macro whose option uses the syntax of that of `\begin{tdocshowcase} ... \end{tdocshowcase}` and the mandatory argument corresponds to the path of the file.

Example .1. *The following was obtained via `\tdocshowcaseinput{external.tex}`.*

Start of the real output

Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...

End of the real output

As for `\tdocshowcaseinput[colstripe = red, coltext = orange!75!black]{external.tex}`, this will produce the color change shown below.

Start of the real output

Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...

End of the real output
