

## 1. By importing the $\LaTeX$ code

To obtain renderings by importing the code from an external file, instead of typing it, simply use the `\tdocshowcaseinput` macro whose option uses the syntax of that of `\begin{tdocshowcase}...` `\end{tdocshowcase}` and the mandatory argument corresponds to the path of the file.

**Example .1.** *The following was obtained via `\tdocshowcaseinput{external.tex}`.*

*Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...*

*As for `\tdocshowcaseinput[color = orange]{external.tex}`, this will produce the colour change shown below.*

*Blablobli, blablobli, blablobli, blablobli, blablobli, blablobli...*
