

1 Improving the source code

Important.

If you want to participate to `tutodoc`, you'll need to use the \LaTeX 3 programming paradigm.

Participation as a coder is made via the repository <https://github.com/bc-tools/for-latex/tree/tutodoc> corresponding to the `tutodoc` development branch.

Caution.

Do not use the `main` branch, which is used to freeze the latest stable versions of projects in the mono repository <https://github.com/bc-tools/for-latex>.
