I. Choose your theme

To modify the general layout, there is the tutodoc class option theme = <choice> where <choice> can take the following values.

- bw: this is a black-and-white theme with some shades of gray.
- color: this colored theme is the default value.
- dark: this theme is dark, ideal for resting the eyes.
- draft: this theme is just right for a printout to look for content errors that aren't necessarily easy to spot in front of a screen.

i Note.

At the end of this document, after the change history, you'll find a gallery of use cases for these different themes: go to appendix page ??.
