## I. What language is used by the tutodoc class?

This documentation loads the babel package via \usepackage [english] {babel} a package that tutodoc does not load. On the other hand, the tutodoc class identifies en as the main language used by babel. As this language is included in the list of languages taken into account, see below, the tutodoc class will produce the expected effects. «API-LANGS»

## i Note.

Packages babel and polyglossia are taken into account.

## **☆** Caution.

If the choice of main language is not made in the preamble, the mechanism used will fail with unintended side effects (see warning that follows).

## & Warning.

When a language is not supported by tutodoc, a warning message is issued, and English is selected as the language for tutodoc.

 $<sup>^1\</sup>mathrm{Technically},$  we use \BCPdata{language} which returns a language in short format.
